

CYREN WebSecurity for Enterprise

MODERN WEB SECURITY FOR MODERN CYBER THREATS

While 21st century cyber threats evolve, the approach used to combat them is rooted in 20th century thinking. Enterprises deploy outmoded static, centralized web security hardware and software in an attempt to stop the constantly-changing threats used by cybercriminals.

CYREN WebSecurity is a Security as a Service (SecaaS) solution that delivers industrial-strength Web protection - regardless of location, or type of device. With CYREN WebSecurity, you can eliminate costly web gateway appliances, their associated overhead, and lack of flexibility against today's threats.

Lower Total Cost of Ownership

No Investment in Hardware, Software or Complex Infrastructure - CYREN WebSecurity does not require any investment in expensive hardware or software – just route your traffic to the cloud for industry-leading web protection. No more costly backhaul routing to bring remote users' traffic to central appliances.

Always Up to Date—Now your web security is always the latest and best. CYREN WebSecurity is powered by our global cyber intelligence, giving you protection from new threats as they emerge, without time-consuming updates.

Device & Location Agnostic Administration—Regardless of where they are and what they use, all your users are protected with consistent, easily defined policies. With CYREN WebSecurity, branch offices and remote users are always protected. You can add security to roaming devices, such as notebooks, smartphones and tablets.

Why You Need Cloud-Based Web Security

- **Minimize your Total Cost of Ownership;** eliminate the need for continual hardware and software upgrades.
- **Increase protection;** by applying the cyber intelligence that protects 600 million users today.
- **Protect users from new threats;** with up-to-the-minute cyber intelligence.
- **Easily manage multiple sites;** our cloud-based platform makes it easy to consistently apply policy, regardless of location.
- **Gain visibility and control of Web use;** with detailed insight across all your users, locations, and devices.
- **Protect your remote and roaming workers;** make it easy for them to work safely outside your network – no matter what device they need or where they are.

With CYREN WebSecurity you can **fight today's web threats with today's technology.** Protect all your users with consistent policies, applied company-wide. Our centralized deployment, monitoring, and porting simplify security management.

CYREN WebSecurity for Enterprise

Applied Cyber Intelligence

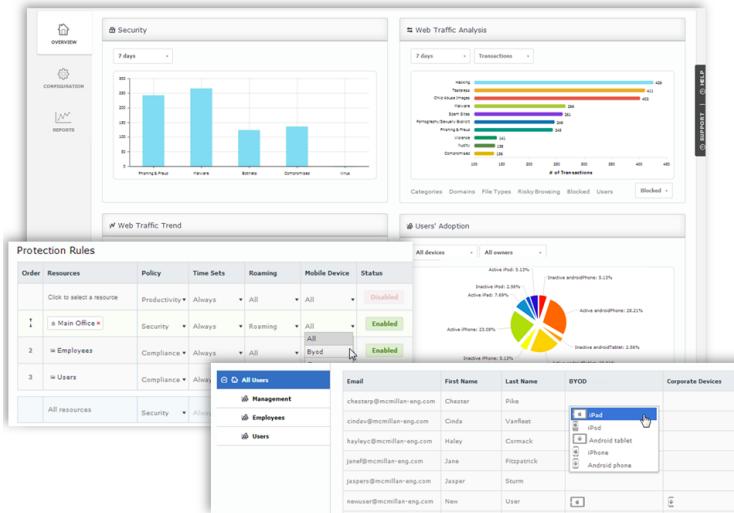

Modern Cloud-based Web Security for the Latest Cyber Threats – With CYREN WebSecurity you have one cloud-based solution for every user, wherever they are and whatever devices they use. CYREN WebSecurity provides consistent real-time cyber intelligence on active online threats.

Best-of-Breed Web Filtering with Flexible Policies and Controls – CYREN uses automated engines and human analysts to continuously classify the current status of the Web using a real-time database of over 150 million URLs. Using this data, CYREN WebSecurity allows you to define, apply and enforce your acceptable use policy for Web use. You can set policies by user, group, location, time of day, and/or type of device in a matter of minutes.

AntiMalware—Reduce the risk of infection on your devices, along with the time and expense of cleanup. CYREN WebSecurity includes the same best-in-class antimalware trusted by the world's largest IT brands. So you can detect known and previously unseen web malware in scripts and downloads, and provide immediate protection for your users.

Increased Visibility and Control

Comprehensive Reporting— CYREN WebSecurity provides comprehensive and customizable reports of your users' Web activity – across all their business devices. All Web access is captured and logged, giving you a detailed picture of exactly how the Web is used in your organization. CYREN WebSecurity gives you an easy-to-use and customizable dashboard that enables you to control the types and size of files that can be downloaded and Web sites that can be visited. Our advanced dashboard gives you instant insight into current threats and Web traffic.

Better Protection for Remote and Roaming Users

Efficiency and a Great User Experience— By shifting your Web security perimeter from a centralized location to the user, CYREN WebSecurity empowers your users to work *where they want, on the device they want* and increasing their protection with the industry's best web security. Furthermore, you reduce operational cost by removing the need to deploy expensive network backhaul to bring remote and roaming users' traffic back to your centralized appliances, and improve user experience by dramatically reducing latency when accessing the Web.
