

The logo for CYREN, with the letters in white on an orange rectangular background.

CYREN

A stylized globe composed of a network of black lines connecting various nodes. Several nodes are highlighted with colored hexagons: a light green one at the top, a light blue one on the left, a dark blue one in the lower-left, a light blue one in the lower-right, and a yellow one on the right edge.

PROTECTING THE WORLD AGAINST INTERNET THREATS

Cyber security at cloud scale.

CYREN GlobalView™: World's Largest Threat Intelligence Network

CYREN has built the industry's largest security intelligence network, powered by a global security cloud which processes threat data from over 500,000 collection points in 200 countries. Operated across 19 global data centers, CYREN's security cloud powers our SaaS web security and email security services, and provides some of the world's leading technology and security vendors—including Google, Microsoft, IBM, Check Point and Fortinet—with the fastest and most accurate threat data in the industry.

600M+

USERS PROTECTED

**The Most
Security Data**

Every day, the CYREN cloud processes over 17 billion transactions generated by over 600 million users across multiple threat vectors to assemble an unmatched view of cyber threats as they emerge. CYREN detects thousands of new, never-before-seen IP addresses, phishing sites, and malicious URLs on a daily basis, providing the deepest and most instantaneous data in the industry on threats as they happen.

17B+

DAILY TRANSACTIONS

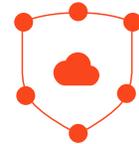

**Big Data
Analytics**

CYREN's data collection footprint and patented detection capabilities combine with extensive expertise in Big Data, advanced heuristics, and machine learning to build actionable global security intelligence on a near-real-time basis. Our cloud cyber security platform: automatically investigates and correlates IP addresses, domains, hosts, and files associated with suspicious behavior; builds risk scores; and is capable of instantaneous reclassification.

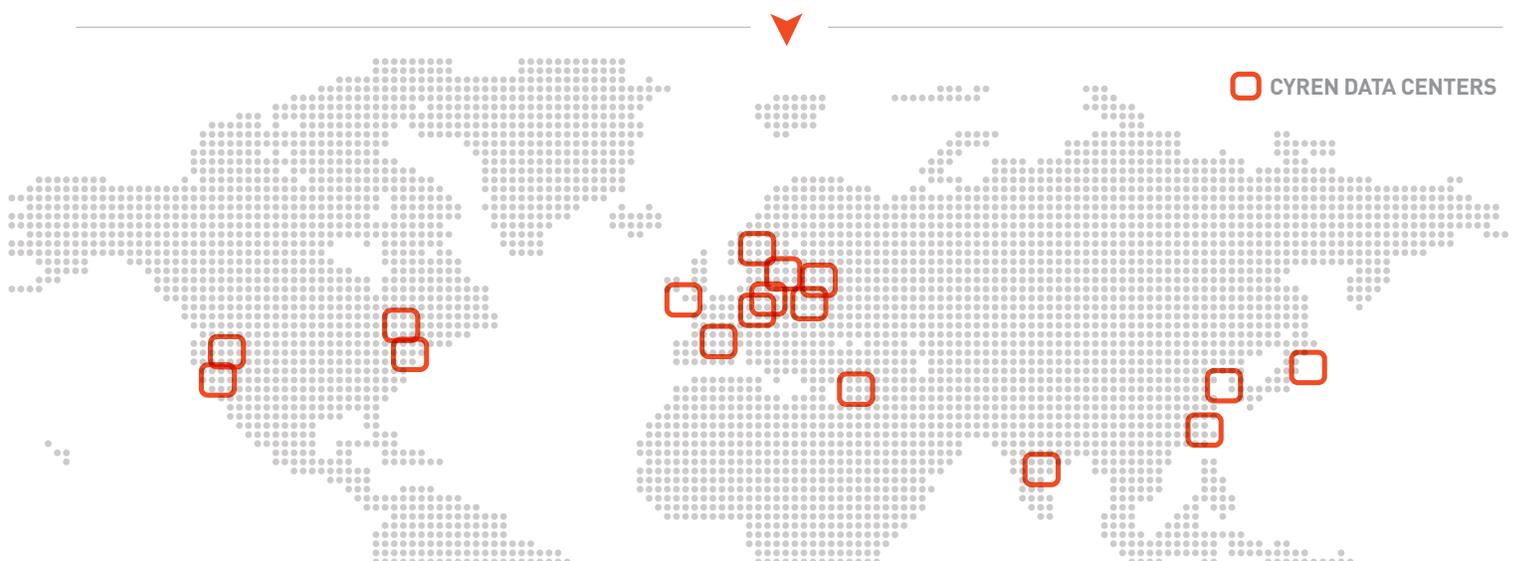

130M+

THREATS BLOCKED DAILY

**The Best
Cyber Intelligence**

This real-time, actionable cyber intelligence powers CYREN's cloud-based enterprise web and e-mail security services and is used by over 200 technology and security vendors. Our security cloud enables protection from malicious messages, hosts and websites with almost no false positives. Intelligence gained from any transaction within the CYREN cyber security platform instantly updates protection for all users.

Enterprise Security SaaS

CYREN's security cloud offers businesses web and e-mail protection for any user, anywhere, and on any device, with intrinsic SaaS simplicity: quick to deploy, easy to manage, comprehensive in coverage, and requiring just a subscription to start—no hardware or software required. With business applications and data moving to the cloud, distributed organizations and mobile employees connecting from everywhere, and cyber threats increasing in volume and sophistication, it's now time to move your security to the cloud, too. CYREN's cloud-scale services allow IT to focus resources on value-adding projects, instead of trying to plug security gaps with increasingly outmanned appliances, and our multi-layered protection dramatically reduces the constant remediation of infected devices—all at a low TCO.

CYREN WebSecurity is your Secure Web Gateway in the cloud. It delivers state-of-the-art protection and enforcement of Web policy for your business users, whether on- or off-network, automatically blocking malicious URLs, malware, viruses, phishing attacks, botnet sites, and sophisticated zero-day attacks.

CYREN WebSecurity can be flexibly deployed for business users or Guest Wi-Fi networks, with service options ranging from lightweight DNS filtering to advanced SSL inspection and innovative zero-day protection with the industry's first cloud sandbox array.

CYREN EmailSecurity works as an upstream email server in the cloud for on-premise or cloud-based business e-mail, and is deployed easily with a change to your MX Record. The service provides powerful and highly accurate spam, phishing and malware protection on an integrated cloud platform with multiple embedded threat defense technologies.

Our industry-leading combination of high detection rates and low false positives means that essential business communications always make it through to the inbox, but threats do not.

OEM Cyber Intelligence Solutions

CYREN empowers technology vendors and large-scale platform vendors with the real-time detection capabilities of our GlobalView threat intelligence network, backed by a dedicated technical and commercial support model. Our globally comprehensive and unique insights into current and emerging threats are provided as individual cyber intelligence services or bundled together as the CYREN Cyber Intelligence Suite.

Cyber Intelligence Suite

IP Monitor

Phishing Outbreak Monitor

Web Malware Monitor

Zero-Day Malware Outbreak Monitor

Cyber Intelligence SDKs

URL Filtering SDK

AntiMalware SDK

AntiSpam SDK

Outbound AntiSpam SDK
