

Fleet Response Sees ROI Within 2 Months After Deploying Cyren Inbox Security

The Challenge

Fleet Response operates entirely from the cloud, including Office 365. They had a secure email gateway service, but it proved to be redundant to the security provided by Microsoft, did not seamlessly fit with a cloud-based architecture, and required constant administration due to false positives.

And despite multiple layers of email security, phishing attacks still got through. The IT team at Fleet Response quickly responded to these attacks, but the incident response effort was costly and disrupted other strategic projects.

The Solution

Fleet Response evaluated Cyren Inbox Security, which perfectly complemented the Microsoft Defender suite of security controls for Office 365 and endpoints. Fleet Response saw three main advantages:

- In tests, Cyren caught and automatically responded to threats that Microsoft technologies didn't.
- Cyren Inbox Security also gave Fleet Response's employees a simple tool, the PhishScan button, to scan emails for threats without filing IT tickets.
- Cyren Inbox Security makes it easy to report on anti-phishing defenses to executives and their cybersecurity insurance provider.

“Cyren Inbox Security is truly a hands-off solution to the phishing problem,” said Miller. “It was a no-brainer to select the Cyren solution once we realized the time it would save the IT team and the risk reduction it provides our organization. Cyren Inbox Security, plus the Microsoft security capabilities and security awareness training, puts us in a good position to defend against one of the biggest attack vectors – email.”

Michael Miller, Director of Information Technology at Fleet Response

The Results

By eliminating both the administrative overhead associated with the secure email gateways and the opportunity costs associated with incident response, Michael Miller, Director of Information Technology at Fleet Response, estimates **Cyren Inbox Security provided a return on investment within two months of deploying it.**

About Fleet Response

Fleet Response is a specialty Third Party Administrator (TPA) providing custom claims management, driver risk monitoring programs, and other high-value services to specialty insurers and corporations that self-insure vehicle fleets. Built from an insurance background, they are experts in understanding and managing risks. For more information visit, fleetresponse.com

About Cyren

Cyren Inbox Security is an easy to deploy solution that protects Office 365 users from sophisticated phishing attacks.

- Catch & prevent spear phishing attacks, spoofed messages, BEC, CEO fraud, and credential theft
- Continuously scan emails, attachments, and URLs for fraud in all folders
- Automatically remediate email threats from every affected inbox
- Simplify incident investigations and save SOC resources
- Employees can scan threats in real time with a single click inside their inbox
