

# Score Group Uses Cyren Inbox Security to Search-and-Destroy Phishing Attacks

## The Challenge

Score Group recently implemented Microsoft's anti-phishing policies (as provided by Defender for Office 365) however, the company had little visibility into evasive attacks outside user-forwarded concerns. Search-and-destroy attacks across the company were manual and time-consuming.

"We simply weren't effectively managing phishing and malware attacks." says Kris McMullan, Head of Security, Risk and Governance.

## The Solution

Score Group knew that additional layers of security were needed, alongside a user-friendly solution that did not require a high level of product expertise, enabling day-to-day management by the security team.

The company already trusted Cyren's reputation for web security and began a trial of Cyren Inbox Security. CIS continuously monitors Office 365 inboxes and automatically remediates advanced email phishing attacks that evade Secure Email Gateways and Microsoft Defender for Office 365.

## The Results

After deploying the trial of Cyren, engagement from employees improved. To support employee awareness and understanding of phishing, an update was posted on the company intranet. A training module is also in development to ensure employees know the difference between a spam email and a phishing email.

Kris continued:

**“Cyren catches phishing attacks that get past Microsoft and the management of it is simple. Attacks are more visible and more manageable using out-of-the-box automation. It also helps us achieve Cyber Essentials Plus accreditation. It's been an absolute pleasure dealing with Cyren, the active involvement of their personnel in the trial allowed us to quickly evaluate the product and address commercial and technical queries - with a minimum delay.”**

## About Score Group

Score Group is a specialist in precision manufacturing, valve supply, automation and management systems and provides complex engineering solutions to customers in multiple markets, including defense, nuclear, aerospace, utilities and energy.

## About Cyren

An easy to deploy solution to protect Office 365 users from sophisticated phishing attacks.

- Catch & prevent spear phishing attacks, spoofed messages, BEC, CEO fraud, and credential theft
- Continuously scan emails, attachments, and URLs for fraud in all folders
- Automatically remediate email threats from every affected inbox
- Simplify incident investigations and save SOC resources
- Employees can scan threats in real time with a single click inside their inbox
